Startup projects

- **Rizamyn Mobile App**
 - Rizamyn is a cashback service that gives you back a percentage of your final purchase price as a bonus to the next purchase. I built the whole project by using React Native technology.
- **Key Word Mobile App**
 - Key Word is a messenger where all users have unique and interesting account names. I built the whole project by using Android technology.

Employment

- **Nazarbayev university**, Research Assistant, April 2019 – Present
 - I am working on the project Smart House (synergy of IoT, robotics, machine learning, mobile development and computer vision) under the tutelage of an experienced professor Adnan Yazici.
- **Dom Invest Real Estate Agency**, Software Engineer, March 2019 – May 2019
 - I helped to integrate a CRM system based on Bitrix24 technology. Bitrix24 is a software service, providing a company with a full range of team working and social networking means. Also, I built a website using Wix technology.
- **Duken me Mobile App**, React Native mobile developer, August 2018 – December 2018.
 - I helped to build a cross platform mobile application Duken me using React Native technology. Duken me is a baby products online store in Kazakhstan. I

mostly worked as a front-end mobile developer and was responsible for whole front-end development of the project.

- **Lemon Tree Mobile App**, Front end Android mobile developer, August 2016 – December 2016.
 - I helped to build a mobile application Lemon Tree using Android technology. Lemon tree is a mobile marketing platform that provides businesses with different tools to conduct marketing researches, to get people's opinion and to increase brand awareness. Users receive points for every and single answer given that may be converted into mobile minutes. I was responsible for the design of the project and mostly worked with XML files.
